

COMMERCIAL PRODUCTS

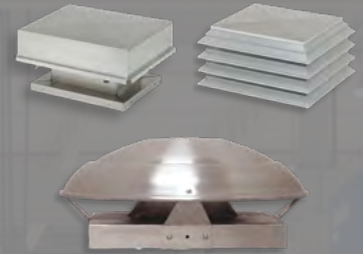

S&P USA offers a full range of products for use in commercial applications. Our commercial fans can be defined by their unique features and versatility. S&P USA is the clear choice for all things commercial, truly a one stop shop for ventilation needs.

CENTRIFUGAL FILTERED SUPPLY FANS provide make-up air to commercial or industrial applications.

CENTRIFUGAL ROOF AND WALL FANS are installed on a roof curb or exterior wall to exhaust air.

GRAVITY VENTS are aluminum intake/relief ventilators designed for use in both gravity and mechanical ventilation systems.

INLINE/SIDEWALL DUCT FANS are used to exhaust, supply, or boost air through ductwork from one area to another in commercial settings.

JET FANS are a pollution control solution that help induce air to a common exhaust point through directed airflow.

ROOF PROPELLER FANS are installed on the roofs of buildings to remove or supply air from commercial and industrial facilities economically.

SIDE WALL PROPELLER FANS are installed on the exterior wall of a building to pull air inside the building and expel it outside.

DUCT-MOUNTED TUBEAXIAL FANS are designed to supply, exhaust, and boost air in applications with moderate static pressure.

UTILITY VENT SETS are designed to work in medium and high-pressure static pressure applications to exhaust or supply air.
